SEMESTER I, SESSION 2023/2024

Lecturer: Dr. Noor Hidayah

Name	Matric No
LEE XIN HUI	A22EC0066

Section: 08

## DML 2 PART 1

## Part 1: Retrieving all columns from a table.

Using the SELECT \* statement show all data stored in the following tables:

1. customers.

```
SELECT *
FROM customers;
```

Results

Explain

Describe

Saved SQL

History

CTR_NUMBER	EMAIL	FIRST_NAME	LAST_NAME	PHONE_NUMBER	CURRENT_BALANCE	SRE_ID	TEM_ID	LOYALTY_CARD_NUMBER

## Part 2: Selecting Specific Columns

1. Display the customer number, first name, last name, email and phone number of the customers.

```
SELECT ctr_number, first_name, last_name, email, phone_number  
FROM customers;
```

Results	Explain	Describe	Saved SQL	History
CTR_NUMBER	FIRST_NAME	LAST_NAME	EMAIL	PHONE_NUMBER
c00103	Andrew	Murcia	MurciaA@globaltech.com	07715246890
c01986	Maria	Galant	margal87@delphiview.com	01442736589
c00012	Jennifer	Jones	Jjones@freemail.com	01505214598
c00001	Robert	Thornberry	bob.thornberry@heatmail.com	01234567898
c00101	John	Doe	unknown@here.com	03216547808
c02001	Brian	Rogers	brianrog@hootech.com	01654564898
6 rows returned in 0.02 seconds <a href="#">Download</a>				

2. Display the name and number of players for each team.

```
SELECT name, number_of_players  
FROM teams;
```

Results	Explain	Describe	Saved SQL	History
NAME		NUMBER_OF_PLAYERS		
Rovers		8		
Jets		10		
Rockets		25		
Celtics		42		
4 rows returned in 0.00 seconds		<a href="#">Download</a>		

3. Display the name, description and category for every item in the table.

```
SELECT name, description, category  
FROM items;
```

Results

Describe

Saved SQL

History

NAME	DESCRIPTION	CATEGORY
gloves	catcher mitt	clothing
under shirt	top worn under the game top	clothing
game top	team shirt with emblem	clothing
premium bat	high quaiity baseball bat	equipment
socks	team socks with emblem	clothing

5 rows returned in 0.01 seconds

Download

## DML 2 PART 2

## Part 1: Using Arithmetic Operators

1. Every customer has been told they can pay off their current balance over a 12 month period. Display the customer's first name, last name, current balance and monthly payment.

```
SELECT first_name, last_name, current_balance, current_balance/12
FROM customers;
```

[illegible]

2. Obl is considering giving a gift card to all its customers of 5.00 that can be used to reduce their current balance. Write a query that will show the customers first name, last name, customer number, current balance and the value of their balance minus the gift value.

```
SELECT first_name, last_name, ctr_number, current_balance, current_balance - 5
FROM customers;
```

Results	Explain	Describe	Saved SQL	History
FIRST_NAME	LAST_NAME	CTR_NUMBER	CURRENT_BALANCE	CURRENT_BALANCE-5
Andrew	Murcia	c00103	85	80
Maria	Galant	c01986	125.65	120.65
Jennifer	Jones	c00012	0	-5
Robert	Thornberry	c00001	150	145
John	Doe	c00101	987.5	982.5
Brian	Rogers	c02001	50	45
6 rows returned in 0.01 seconds <a href="#">Download</a>				

3. What would be the problem with implementing this scheme?

The current balance cannot go below to zero. If the current balance is smaller than the gift value being subtracted, the output of the calculated column will indeed be negative.

## Part 2 : Using Column Aliases

1. You previously wrote a query that display the customer's first name, last name, current balance and monthly payment. Rewrite the query to use First Name, Last Name, Balance and Monthly Repayments as the column aliases. The aliases are to be shown exactly as described (case sensitive).

```
SELECT first_name "First Name" , last_name "Last Name", current_balance "Balance",  
current_balance/12 "Monthly Repayments"  
FROM customers;
```

[illegible]

### Part 3: Using Literal Character Strings

1. Write a query that will display the team information in the following format:

The Rockets team has 25 players and receives a discount of 10 percent.

Use **Team Information** as the column alias.

```
SELECT 'The ' || name || ' team has ' || number_of_players || ' players and receives a discount of ' || discount || ' percent' AS "Team Information"  
FROM teams;
```

Results	Explain	Describe	Saved SQL	History
Team Information				
The Rovers team has 8 players and receives a discount of percent				
The Jets team has 10 players and receives a discount of 5 percent				
The Rockets team has 25 players and receives a discount of 10 percent				
The Celtics team has 42 players and receives a discount of 20 percent				
4 rows returned in 0.01 seconds <a href="#">Download</a>				

2. Why does the last team not show a discount?

The discount values inserted into the teams table where name = 'Rovers' are indeed NULL, hence that specific team does not show a discount due to the absence of a defined discount value for that particular team.

## DML 2 PART 3

### Part 1: Using the WHERE Clause.

1. Using the unique customer number in the where clause display all columns for Maria Galant.

```
SELECT *  
FROM customers  
WHERE ctr_number = 'c01986';
```

Results Explain Describe Saved SQL History								
CTR_NUMBER	EMAIL	FIRST_NAME	LAST_NAME	PHONE_NUMBER	CURRENT_BALANCE	SRE_ID	TEM_ID	LOYALTY_CARD_NUMBER
c01986	margal87@delphiview.com	Maria	Galant	01442736589	125.65	sr03	t003	-
1 rows returned in 0.02 seconds <a href="#">Download</a>								

2. Display the first name, last name and customer number for all customers who have a current balance of greater than 100. Use an appropriate alias for your column headings.

```
SELECT first_name "First Name" , last_name "Last Name" , ctr_number "Customer Number"  
FROM customers  
WHERE current_balance > 100;
```

Results Explain Describe Saved SQL History		
First Name	Last Name	Customer Number
Maria	Galant	c01986
Robert	Thornberry	c00001
John	Doe	c00101
3 rows returned in 0.03 seconds <a href="#">Download</a>		

- Display the order id, date and time of all orders that were placed before the 28<sup>th</sup> of May 2019. Use an appropriate alias for your column headings.

```
SELECT id "Order Id", odr_date "Order Date", odr_time "Order Time"  
FROM orders  
WHERE odr_date < TO_DATE('28-May-2019', 'DD-MM-YYYY');
```

Results Explain Describe Saved SQL History			
Order Id		Order Date	Order Time
or0101250		04/17/2017	04/17/2017
or0101681		06/02/2017	06/02/2017
or0101350		05/24/2017	05/24/2017
or0101425		05/28/2017	05/28/2017
or0101750		06/18/2017	06/18/2017
5 rows returned in 0.03 seconds <a href="#">Download</a>			

## Part 2: Range Conditions: BETWEEN Operator

- Display the inventory id, cost and number of units using appropriate aliases for all items that have a trade cost of between 3.00 and 15.00.

```
SELECT id "Inventory Id", cost "Cost", units "Number of Units"  
FROM inventory_list  
WHERE cost BETWEEN 3 AND 15;
```

Results Explain Describe Saved SQL History			
Inventory Id		Cost	Number of Units
il010230125		7.99	250
il010230126		5.24	87
2 rows returned in 0.03 seconds <a href="#">Download</a>			

### Part 3: Membership Conditions: IN Operator

1. Display the inventory id, cost and number of units using appropriate aliases for all items that have 50, 100, 150 or 200 units in stock.

```
SELECT id "Inventory Id", cost "Cost", units "Number of Units"  
FROM inventory_list  
WHERE units IN (50, 100, 150, 200);
```

Results	Explain	Describe	Saved SQL	History
Inventory Id		Cost	Number of Units	
il010230124		2.5	100	
1 rows returned in 0.03 seconds <a href="#">Download</a>				

### Part 4: Membership Conditions: NOT IN Operator

1. Display the inventory id, cost and number of units using appropriate aliases for all items that do not have 50, 100, 150 or 200 units in stock.

```
SELECT id "Inventory Id", cost "Cost", units "Number of Units"  
FROM inventory_list  
WHERE units NOT IN (50, 100, 150, 200);
```

Results

Explain

Describe

Saved SQL

History

Inventory Id	Cost	Number of Units
il010230128	97.46	8
il010230125	7.99	250
il010230126	5.24	87
il010230127	18.95	65

4 rows returned in 0.01 seconds [Download](#)

## Part 5: Pattern Matching: LIKE Operator

1. Display item number and name of all items that have a name that begins with g. Use an appropriate alias for your column headings.

```
SELECT itm_number "Item Number", name "Item Name"
FROM items
WHERE name LIKE 'g%';
```

Results

Explain

Describe

Saved SQL

History

Item Number	Item Name
im01101044	gloves
im01101047	game top

2 rows returned in 0.02 seconds

Download

## Part 6 : Pattern Matching: Combining Wildcard Characters with the LIKE Operator

1. Display item number and name of all items that have a name that contain a lowercase o. Use an appropriate alias for your column headings.

```
SELECT itm_number "Item Number", name "Item Name"
FROM items
WHERE name LIKE '_o%';
```

Results

## DML 2 PART 4

### Part 1: Using the NULL Conditions

1. Write a query that will display information for teams that don't receive a discount in the following format: The Rovers team has 25 players and does not receive a discount. Use **Team Information** as the column alias.

```
SELECT 'The ' || name || ' team has ' || number_of_players || ' players and does not receive a discount.' AS "Team Information"
FROM teams
WHERE discount IS NULL;
```

Results	Explain	Describe	Saved SQL	History
Team Information				
The Rovers team has 8 players and does not receive a discount.				
1 rows returned in 0.03 seconds <a href="#">Download</a>				

2. Write a query that will display information for only teams that receive a discount in the following format: The Rockets team has 25 players and receives a discount of 10 percent. Use **Team Information** as the column alias.

```
SELECT 'The ' || name || ' team has ' || number_of_players || ' players and receives a discount of ' || discount || ' percent.' AS "Team Information"
FROM teams
WHERE discount IS NOT NULL;
```

Results	Explain	Describe	Saved SQL	History
Team Information				
The Jets team has 10 players and receives a discount of 5 percent.				
The Rockets team has 25 players and receives a discount of 10 percent.				
The Celtics team has 42 players and receives a discount of 20 percent.				
3 rows returned in 0.01 seconds <a href="#">Download</a>				

## Part 2: Logical Operators: AND

1. Write a query that will display the customer number, address line 1 and postal code for customers that live in the starford area of Liverpool. Use Customer Number, Street Address and Postal Code as the column aliases.

```
SELECT ctr_number "Customer Number", Address_line_1 "Street Address", zip_code "Postal Code"  
FROM customers_addresses  
WHERE city = 'Liverpool' AND address_line_2 = 'Starford';
```

Results Explain Describe Saved SQL History		
Customer Number	Street Address	Postal Code
c00001	17 Gartsquare Road	LP89JHK
1 rows returned in 0.03 seconds <a href="#">Download</a>		

## Part 3: Logical Operators: OR

1. Write a query that will display the customer number, address line 1 and postal code for customers that live in either starford or Liverpool in general. Use Customer Number, Street Address and Postal Code as the column aliases.

```
SELECT ctr_number "Customer Number", Address_line_1 "Street Address",  
zip_code "Postal Code"  
FROM customers_addresses  
WHERE city = 'Liverpool' OR address_line_2 = 'Starford';
```

Results Explain Describe Saved SQL History		
Customer Number	Street Address	Postal Code
c00001	17 Gartsquare Road	LP89JHK
c00001	63 Acacia Drive	LP83JHR
2 rows returned in 0.01 seconds <a href="#">Download</a>		

## Part 4: Logical Operators: NOT Equal To

1. Write a query that will display the customer number, address line 1 and postal code for customers that do not live in Liverpool. Use Customer Number, Street Address and Postal Code as the column aliases.

```
SELECT ctr_number "Customer Number", Address_line_1 "Street Address", zip_code "Postal Code"  
FROM customers_addresses  
WHERE city NOT IN ( 'Liverpool' );
```

Results			Explain	Describe	Saved SQL	History
Customer Number			Street Address			Postal Code
c01986			36 Watercress Lane			JP23YTH
c00101			54 Ropehill Crescent			ST45AGV
2 rows returned in 0.03 seconds			<a href="#">Download</a>			

## DML 2 PART 5

### Use the ORDER BY Clause to Sort SQL Results (S6L8 Objective 1)

In this exercise you will sort the order of the data that is returned in your query by adding an ORDER BY clause to the end of your SELECT statement.

1. Display the team name and number of players alphabetically in order of team name. Use an appropriate alias for your column headings.

```
SELECT name "Team Name", number_of_players "Number of Players"  
FROM teams  
ORDER BY name;
```

Results	Explain	Describe	Saved SQL	History
Team Name			Number of Players	
Celtics			42	
Jets			10	
Rockets			25	
Rovers			8	
4 rows returned in 0.01 seconds <a href="#">Download</a>				

2. Display the team name and number of players in descending order of number of players. Use an appropriate alias for your column headings.

```
SELECT name "Team Name", number_of_players "Number of Players"  
FROM teams  
ORDER BY number_of_players DESC;
```

Results	Explain	Describe	Saved SQL	History
Team Name			Number of Players	
Celtics			42	
Rockets			25	
Jets			10	
Rovers			8	
4 rows returned in 0.01 seconds				
<a href="#">Download</a>				

3. Display the team name and number of players alphabetically in order of team name. Use Team Name for the name alias and Players for the number of players. Sort the output in descending order of name using the alias in the ORDER BY clause.

```
SELECT name "Team Name", number_of_players "Number of Players"  
FROM teams  
ORDER BY "Team Name" DESC;
```

Results	Explain	Describe	Saved SQL	History
Team Name		Number of Players		
Rovers		8		
Rockets		25		
Jets		10		
Celtics		42		
4 rows returned in 0.01 seconds		<a href="#">Download</a>		

## DML 2 PART 6

### Part 1 : TOP-N-ANALYSIS (S6L8 Objective 3)

1. The customers are numbered sequentially with each new customer being assigned a higher customer number.

Use TOP-N-ANALYSIS to only show the First and last name of the first three customers. Show the customers first and last name in the same column using Customer Name as the column alias.

```
SELECT ROWNUM AS "Order for Customers Numbers", first_name || ' ' || last_name "Customer Name"
FROM customers
WHERE ROWNUM<=3
ORDER BY ctr_number;
```

Results	Explain	Describe	Saved SQL	History
Order for Customers Numbers			Customer Name	
3				Jennifer Jones
1				Andrew Murcia
2				Maria Galant
3 rows returned in 0.01 seconds <a href="#">Download</a>				

### Part 2 : Using a Substitution Variable (S6L8 Objective 4)

1. Use a substitution variable that will allow you to enter the commission rate for the sales representatives. The first and last names should be displayed to screen for any sales representatives that earn that commission rate and the output should be ordered by their last name. Use an appropriate alias for your column headings.

```
SELECT first_name || ' ' || last_name "Sales Representative Name"
FROM sales_representatives
WHERE commission_rate = :commission_rate
ORDER BY last_name;
```

<a href="#">Submit</a>	
Bind Variable	Value
:COMMISSION_RATE	<input type="text" value="5"/>

Results	Explain	Describe	Saved SQL	History
Sales Representative Name				
Barry Speed				
Victoria Wright				
2 rows returned in 0.06 seconds <a href="#">Download</a>
