DML2 PART 2

Section 6 Lesson 6 Exercise 2: Retrieving Data Using SELECT

Write and Execute SELECT statements (S6L6 Objective 2) In this exercise you will retrieve data that is stored in the database system by using a SELECT statement.

Part 1: Using Arithmetic Operators

1. Every customer has been told they can pay off their current balance over a 12 month period. Display the customer's first name, last name, current balance and monthly payment.

[illegible]

2. Obl is considering giving a gift card to all its customers of 5.00 that can be used to reduce their current balance. Write a query that will show the customers first name, last name, customer number, current balance and the value of their balance minus the gift value.

```
1 SELECT first_name, last_name, ctr_number, current_balance, current_balance-5
2 FROM customers;
```

Results Explain Describe Saved SQL History

FIRST_NAME	LAST_NAME	CTR_NUMBER	CURRENT_BALANCE	CURRENT_BALANCE-5
Robert	Thornberry	c00001	150	145
Jennifer	Jones	c00012	0	-5
John	Doe	c00101	987.5	982.5
Andrew	Murcia	c00103	85	80
Maria	Galant	c01986	125.65	120.65
Brian	Rogers	c02001	50	45

6 rows returned in 0.01 seconds [Download](#)

3. What would be the problem with implementing this scheme?

ANS: The current balance cannot be zero value

Part 2 : Using Column Aliases

1. You previously wrote a query that display the customer's first name, last name, current balance and monthly payment. Rewrite the query to use First Name, Last Name, Balance and Monthly Repayments as the column aliases. The aliases are to be shown exactly as described (case sensitive).

```
1 SELECT first_name AS "First Name", last_name AS "Last Name", current_balance
2 AS "Balance", current_balance/12 AS "Monthly Repayments"
3 FROM customers;
```

Results	Explain	Describe	Saved SQL	History

Part 3: Using Literal Character Strings

1. Write a query that will display the team information in the following format:
The Rockets team has 25 players and receives a discount of 10 percent.
Use Team Information as the column alias.

```
1 SELECT 'The ' || name || ' team has ' || number_of_players || ' players and receives a discount of ' ||
2 discount || ' percent.' AS "Team Information"
3 FROM teams;
```

Results	Explain	Describe	Saved SQL	History

The Jets team has 10 players and receives a discount of 5 percent.				
The Rockets team has 25 players and receives a discount of 10 percent.				
The Celtics team has 42 players and receives a discount of 20 percent.				
The Rovers team has 8 players and receives a discount of percent.				
4 rows returned in 0.00 seconds Download				

2. Why does the last team not show a discount?
ANS: It contains the zero value, which means doesn't equal zero.

DML2 PART 3

Use the ORDER BY Clause to Sort SQL Results (S6L8 Objective 1)

In this exercise you will sort the order of the data that is returned in your query by adding an ORDER BY clause to the end of your SELECT statement.

1. Display the team name and number of players alphabetically in order of team name.
Use an appropriate alias for your column headings.

```
1 SELECT name AS "Team Name", number_of_players AS "Number of Players"

Part 1 : TOP-N-ANALYSIS (S6L8 Objective 3)

1. The customers are numbered sequentially with each new customer being assigned a higher customer number. Use TOP-N-ANALYSIS to only show the First and last name of the first three customers. Show the customers first and last name in the same column using Customer Name as the column alias

```
1 SELECT first_name || ' ' || last_name AS "Customer Name" FROM (

Part 2 : Using a Substitution Variable (S6L8 Objective 4)

1. Use a substitution variable that will allow you to enter the commission rate for the sales representatives. The first and last names should be displayed to screen for any sales representatives that earn that commission rate and the output should be ordered by their last name. Use an appropriate alias for your column headings.
