Section 6 Lesson 4 Exercise 1: Data Manipulation Language
Use DML operations to manage database tables (S6L4 Objective 2)
In this exercise you will populate and work with the data that is stored in the database system tables.

Part 1: Running a script to populate the tables.
You have to consider the order of the tables when populating them. A table that has a foreign key field cannot be populated before the related table with the primary key.
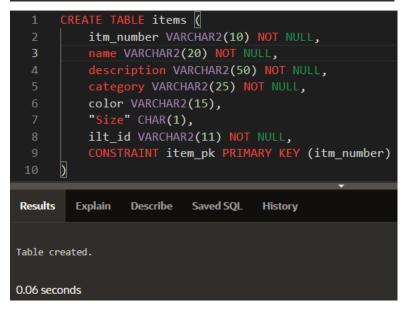

1. Use the table mapping document and list the order that you would use to populate the tables.
a) inventory_list
b) items
c) price_history
d) sales_representatives
e) sales_rep_addresses
f) teams
g) customers
h) customers_addresses
i) orders
j) ordered_items

```
1    CREATE TABLE inventory_list (
2        id VARCHAR2(11) NOT NULL,
3        cost NUMBER (7,2) NOT NULL,
4        units NUMBER(4) NOT NULL,
5        CONSTRAINT inventory_list_pk PRIMARY KEY (id)
6    )
```

2. Open the "sports data.sql" and look at the order the data is being added there, does your list match? This file can be found in the Section 6 Lesson 4 interaction (sports data.zip) and must first be extracted.
    Yes, it matched.
3. Run the "sports data.sql" script in APEX to populate your tables.
4. 4.Check that no errors occurred when you ran the script

Section 6 Lesson 4 Exercise 2: Data Manipulation Language
Use DML operations to manage database tables (S6L4 Objective 2) In this exercise you will populate and work with the data that is stored in the database system.

Part 1- Updating rows to the system
1. Run the following query to view the content of the price_history table:
   SELECT start_date, TO_CHAR (start_time, 'HH24:MI:SS'), price, end_date, TO_CHAR (end_time, 'HH24:MI')
   FROM price_history;

```
1    SELECT start_date, TO_CHAR (start_time, 'HH24:MI:SS'), price, end_date, TO_CHAR
2    (end_time, 'HH24:MI')
```

Results   Explain   Describe   Saved SQL   History

START_DATE	TO_CHAR(START_TIME,'HH24:MI:SS')	PRICE	END_DATE	TO_CHAR(END_TIME,'HH24:MI')

2. Obl is going to update the price of the premium bat so you will need to write a query that will close off the current price by adding the system date values to the end_date and end_time fields. To run this query you will need to both match the item number and identify that the end date is null. This ensures that you are updating the latest price.

```
1    UPDATE price_history
2    SET end_date = SYSDATE, end_time = SYSDATE
3    WHERE itm_number = 'im01101045' AND end_date is null;
```

3. Rerun the select statement on the price_history table to ensure that the statement has been executed.

```
1    SELECT start_date, TO_CHAR (start_time, 'HH24:MI:SS'), price, end_date, TO_CHAR
2    (end_time, 'HH24:MI')
```

4. Insert a new row that will use the current date and time to set the new price of the premium bat to be 99.99.

```
1    INSERT INTO price_history (start_date, start_time, price, itm_number)
